

Lofi Fi Sketch Presentation
Summarized Customer Notes

- Governance docs are publicly available, no need to keep them in members only site
- They're in favour of a request button, since people occasionally like to see other sections music
- They emphasized they want file uploading to be simple, not like 11 steps
- Another alternative to the proposed tagging system from last week is a Google-like search engine, will need to look for wordpress plugins that allow for that
- Would like the option to have a photo in contact information, as well as the ability to opt in or out of sharing phone numbers
- Mentioned the importance of notifying RMO members, either using email or text message notification. They prefer defaulting to email.
- Another idea is the addition of some kind of commenting system underneath posts, for getting feedback from members, would need to be controllable by admins
- Members page is more like communications, you go to it, and can see what's happening over the next week. They stressed the need for communication to be possible over the member page, they want to be able to be easily caught up for the next week using the site.
- Mentioned the need for the yes/no system underneath events, in order to gauge who's available for certain activities.
- About hybrid sheet music/recording/note viewer: Would like the inclusion of an annotated sheet rather than the notes as a viewer on the side, there's some form of internal consistency issue around it about how they do notes currently, which might make the separate note viewer less useful
- Possibly consider implementing the notes as a sheet music type document, with all of a section's annotations over a certain time all in one document
- They liked the idea of a community post section, but they stressed the importance of notifying users when new posts are made, as well as easily linking to those new changes
- Prefer a simpler homepage over one with multiple ways to do something, they don't like drop down menus, they think the tiles are readable and accessible (while still allowing for lists due to long file names)
- Want a single navbar, expressed concern about not being able to find certain options with multiple navbars
