Notes on RMO members comments on Presentations:

- Include a part in the calendar about signing up for opting in or out to an event, w/ a couple of new buttons
- Should add a signifier how to download sheet music, asked a question about how to download when prototype had just an icon
- They want icons to facebook and twitter to the header/footer, won't be too hard to add
- Asked about showing Admin who has payed dues or not in contact list (as well as sending those users email notifications)
- Upon seeing the larger, open contact list, they mentioned an option for users to only display some personal info to admins
- Asking about admins getting an email about new accounts and verifying before sending a token, or if it's automated (prefering the former)
- Want to add a button to archive old songs and other files, removing them from main page
- Mentioned to maybe just have a temporary disable button as well as account deletion, since members don't always pay dues, since they aren't always active
- They don't necessarily want to use google calendar on site anymore, could switch to different system, want to be able to subscribe to it, and being able fill in personal calendars, (which could still be google/ical)
- Some kind of highlighting for certain events, like changing the colour on the calendar
- Said they probably won't continue with newsletters, not worth the effort making them usable on the site, just have an archive
- Need to include sorting and filtering on the archive, said they don't want it to be like a messy basement
- Capability for account to have multiple traits at once, such as an instructor who also plays in a section
- The public site is beyond our scope, it's not worth adding onto it
- Like being able to upload multiple files and assigning them to different sections all at once, since that's usually needed
- They want different colours to have specific meaning rather than just for readability, mentioned it was confusing w/ alternating ones

- Want varying levels of admin capabilities, so section leaders can modify certain parts of the site, such as section's notes, but aren't modifying rest of the site. Adding private areas adds unneeded complexity, could try not to send notes/music to wrong people
- Suggested rankings (in order of ability):
    - Web admin, can do all admin featues
    - Conductor
    - Section Leaders, only their section
    - Teachers
    - Everyone else (regular members, students)
- Want specifics about fees added to each person's profile, if they've been payed and also the due date, possibly send a notification after enough time

- Comments from Our Presentation
- Liked the monthly calendar setup, agenda-styled one might not be as useful
- They want more buttons always visible on the menu, not just the profile and notifications
- They liked the (possibly not implementable) notifications, showing what would have been sent as emails
- There was discussion about how possible a search bar is, might not be feasible if everything is an unindexed PDF
- Like feature where the members can indicate who's coming to events
- Are not sure if they want to keep the archive in current format or not, could use some refining
